

Rejuran Treatment Aftercare

Skin healing from within. The Korean secret is yours now.

✓ DO:

- Keep treated area clean with a gentle fragrance-free cleanser
- Apply a calming, hydrating moisturizer
- Wear SPF 30+ every day — sun protection maximizes results
- Stay well hydrated to support the skin repair process
- Allow micro-papules (small bumps) to absorb naturally

⊘ AVOID for 24-48 Hours:

- Makeup for at least 12-24 hours
- Active skincare: retinol, vitamin C, AHAs, or BHAs
- Sun, tanning, or excessive heat
- Saunas, steam rooms, hot showers, or strenuous workouts
- Touching, pressing, or massaging treated area

🔬 What is Rejuran?

- Made from polynucleotides (PN) derived from salmon DNA
- Biocompatible — works in harmony with human skin
- Injected into the dermis to activate skin's own repair process
- Originally developed in Korea — now a global skin-care secret!

📅 Healing Timeline:

- Hours 1-6: Small white papules (bumps) visible at injection sites
- Day 1-2: Papules begin to absorb naturally
- Week 2-4: Skin becomes firmer, smoother & more hydrated
- Week 4-8: Full improvement in elasticity & fine lines

⌚ What to Expect:

- Small white papules absorb within 24-48 hours
- Mild redness and swelling for 1-2 days
- Skin gradually firmer, smoother & more hydrated over 4-8 weeks
- Series of 3-4 sessions spaced 4 weeks apart recommended

⚠️ Call Us If You Notice:

- Papules not resolving after 72 hours, infection signs, or allergic reaction

The Korean skin secret: Rejuran (also called PDRN therapy) has been a staple of Korean skincare clinics for over a decade. It works differently from fillers or toxins — instead of adding or relaxing, it literally teaches your skin cells to repair themselves by delivering polynucleotides directly into the dermis. Think of it as a deep reset for your skin!
